## MULTIPLE FS9.EXE: do it yourself! No tool ©

Hi friends,

Some sceneries request TERRAIN\_MAX\_VERTEX\_LEVEL = 19, some 20 or 21.... Others work better with UNLIMITED FRAMERATE, some work only with frames limited to 24, 25 or whatever fps.... Some Photorealistic sceneries will get blurry when using EXTENDED TEXTURES, others no.... Some aircrafts have a specific joystick configuration; others like helicopters will have a completely different one....

I was personally fed up with spending time tweaking this poor FS9.cfg file, having thousands of different copies in my computer when I just observed that Microsoft offers us a very easy way to build several FS9.exe, one for each configuration. So now I have on my desktop several FS9 icons, each one is loading FS with its specific config:

Very cool, really and so easy to do!!!. Do you want to know how to do that in 2 minutes? So follow me! ©

### • CREATING MULTIPLE FS9.CFG

- 1) Backup your FS9.cfg
- 2) Create on your desktop as much folders (configurations) as you wish
- 3) Copy in each folder your "normal" FS9.cfg

4) Now in my example I will take the FS9.cfg inside CINEMATIC (for Alaska Cinematic, the fantastic scenery made by Georender) and move it to C:\Documents and Settings\your name\Application Data\Microsoft\FS9

douid@noos.fr

replacing the existing one (ok, it's the same one but it's helpful to do this small work, you will understand that right now...)

- 5) Load FS, make all the changes you want that match this type of scenery in the OPTIONS (display, harware etc...) and shut down FS. Your FS9.cgf is now "specific" to this scenery, ok?
- 6) So move back this customized FS9.cfg into the CINEMATIC (or whatever) folder it was coming from
- 7) RENAME it (here it will be CINEMATIC.Cfg)
- 8) Do the same for all the other folders situations, according to the requirements, your taste, etc...

So! We have different folders containing different FS9.cfg that are named now IFR.cfg, VFR.cfg, Mega.cfg etc.... very simple, huh??

9) Now, take all these cfg files from the folders on your desktop and copy them directly into your Main FS9 directory (yes the MAIN directory!!!!)

### • CREATING FS9.EXE SHORTCUTS

#### 10) On your desktop, right click and choose CREATE NEW SHORTCUT 11) Browse to find FS9.exe

 This wizard helps you to create shortcuts to local or network programs, files, folders, computers, or Internet addresses.

 Type the location of the item:

 soft Games\Flight Simulator 9\fs9.exe"

 Browse...

 Click Next to continue.

×

douid@noos.fr

# 12) At the end of the line \fs9.exe" add a **SPACE** and write /CFG:CINEMATIC (in my example)

You will get something like ... Games\Flight Simulator \fs9.exe" /CFG:CINEMATIC (Beware! You don't have to write the cfg suffix!)

13) Click Next, give a name to your shortcut to recognize it easily and you are done.

14) Do the same for all the others shortcuts:

... Games\Flight Simulator \fs9.exe" /CFG:IFR ... Games\Flight Simulator \fs9.exe" /CFG:VFR etc....

You now have several FS9.exe with their specific configs and name and before you fly just click the one that will match your next flight. All the parameters will be already installed.

This small tutorial is free. Do what you want with it, it belongs to the simmers community now © Enjoy ! David Roch Jerusalem Dec 2005
